

SIRIS

WHAT DOES CONTINUITY MEAN FOR YOUR BUSINESS?

Imagine you are a medical practice that can't book appointments because your server is down. How long could this business be down before it starts to "hurt" patients? Imagine you are a law firm that needs specific case files, but whose files were recently "locked up" by the Cryptolocker virus. Imagine you are a retail business that needs to process hundreds of transactions a day, but your point of sale system was damaged in an electrical storm, and you can't process and record transactions. How will you stay in business? What will you do?

Now imagine getting it all back in a matter of seconds. Your business is running, and you're back to making business decisions.

It's no longer a matter of "if," but "when" a real world threat will compromise your business data. Between natural disasters, viruses, user error, and ransomware like "cryptolocker," these threats are becoming ever-present.

BUSINESS CONTINUITY MADE FOR YOUR BUSINESS

No matter how complex your IT environment may be, business continuity should be simple, fast, and fail-safe. It should work when you need it to – in an instant's notice – locally in your office or from an off-site location. It should prove itself day in and day out on your schedule.

Datto SIRIS is a robust business continuity solution that brings together state of the art hardware with a secure cloud storage capability. The result is a comprehensive backup, recovery, and business continuity solution that gets your business up and running instantly in the event you can't access your data or systems.

WITH A SIRIS YOU GET TOTAL DATA PROTECTION

SIRIS combines the most important elements of data protection into a single fully integrated package: backup capture and verification, backup restore, and a complete virtual host for business continuity.

- **Leverage award winning core technologies**

Easily protect your IT infrastructure without the need for multiple tools. Backup your data, including your operating systems and applications from Windows or Linux, and files and folders from your Mac automatically to a local device with copies in our secure cloud storage environment.

- **Recover critical data quickly**

Should you experience a server failure, the SIRIS can have your Windows or Linux environment and data recreated in minutes from the local device or the Datto Cloud, and have your Mac files and folders recovered just as quickly.

- **Proof that your backup was successful**

Visual proof in the form of a screenshot and service verification gives you peace of mind that your data has been successfully backed up.

- **Compare backup points**

Now you never need to guess when data was deleted, added, or modified. You can know what changed and when – in a matter of minutes.

DATTO NETWORKING PRODUCTS

BUILT FOR PERFORMANCE

Datto Networking's intuitive products deliver advanced networking features for today's complex networking environment, and includes options that scale as business needs change.

DATTO NETWORKING APPLIANCE

The Datto Networking Appliance delivers network edge routing, firewall, WiFi, intrusion detection and prevention and fully integrated 4G LTE failover and failback from Verizon Wireless, all packaged in a single device, from a single vendor. Designed for managed service providers, the Datto Networking Appliance includes an easy-to-use yet powerful cloud management system with configuration options that will meet the needs of small to medium sized business deployments. The Datto Networking Appliance incorporates an eight core 2.4GHz Intel processor, 8 GB DDR3, 32 GB Industrial Compact Flash drive, six built-in 10/100/1000 Ethernet Ports and fully integrated, multi-band, Cat4 Radio (Verizon Wireless 4G LTE).

DATTO NETWORKING SWITCHES

Datto Networking Switches include robust Layer 2 management features including line rate switching, link aggregation, port mirroring/trunking, STP, IGMP snooping, VLAN, port security, storm control, port isolation, attack prevention, ACL, SNMP, and more. Datto switches seamlessly integrate with Datto Networking WiFi access points, and are managed in the cloud. Each port includes PoE+ (802.3af/at) to provide power flexibility for all kinds of IP devices. With 8, 24 or 48 port options, Datto Networking Switches meet the demands of small to medium sized businesses.

DATTO NETWORKING WIFI

Datto Networking WiFi includes everything needed to quickly and easily deploy wireless networks across one site or many. Each WiFi device includes a cloudmanaged access point, router, mesh gateway and repeater in one compact package, designed to work seamlessly with other Datto Networking products. Access points ship with enclosures designed to install in virtually any environment, are fully mesh enabled, and deliver enterprise-grade WiFi featuring dual band simultaneous 2.4GHz/5GHz, up to 3x3 configurations on wireless N or AC, Gigabit Ethernet, standard 802.3af PoE and more. With advanced self-healing and selforganizing functionality, Datto Networking WiFi simplifies the deployment and ongoing management of WiFi networks.
